18 ways supply chain digital twins streamline logistics

Publicada en <https://venturebeat.com>, 25/04/2022.

Digital twins have become increasingly invaluable for enterprises to improve their supply chain planning. Whereas many digital twins simulate products or buildings, supply chain twins model the diffuse connections between raw materials

What's Next for IIoT Device Connectivity?

Publicada en <https://www.automation.com>, 22/04/2022.

April 22, 2022 - The Industrial Internet of Things (IIoT) has not only blurred the lines between OT and IT disciplines, but also led to the increasing prevalence of large-scale and highly distributed applications where field devices are dispersed over a wide area and need to communicate directly with remote servers.

Drones have transformed blood delivery in Rwanda

Publicada en <https://www.wired.com/>, 21/04/2022.

The autonomous aircraft have shuttled blood to rural, mountainous areas for years. A new analysis proves they're faster than driving. Six years ago, Rwanda had a blood delivery problem. More than 12 million people live in the small East African country, and like those in other nations, sometimes they get into car accidents.

El Ministerio de Industria lanza la línea de ayudas 'Activa Financiación' con 140 M€ para apoyar la transformación digital de la industria

Publicada en <https://www.lamoncloa.gob.es/>, 13/04/2022.

Para el secretario general de Industria y de la Pyme, Raül Blanco, "es fundamental el acompañamiento del Gobierno en estos procesos de modernización de la industria. Queremos modernizar y hacer más resistente y competitivo nuestro modelo productivo a través de la transformación digital, la economía verde y la innovación".

Playing with DALL-E 2

Publicada en <https://www.lesswrong.com>, 07/04/2022.

I got access to Dall-E 2 yesterday. Here are some pretty pictures! My goal was to try to understand what things DE2 could do well, and what things it had trouble understanding or generating. My general hypothesis is that it would do a better job with things that are easy to find on the internet (cute animals, digital scifi things, famous art) and less well with more abstract or more unusual things.

Energy efficiency guru Amory Lovins: 'it's the largest, cheapest, safest, cleanest way to address the crisis'

Publicada en <https://www.theguardian.com>, 26/03/2022.

One of the leading advocates of energy conservation explains why this could be a turning point for climate economics Temperatures dropped far below freezing this week in Snowmass, Colorado. But Amory Lovins, who lives high up in the mountains at 7,200ft above sea level, did not even turn on the heating.

The next generation of robots will be shape-shifters

Publicada en ScienceDaily, 11/03/2022.

Physicists have discovered a new way to coat soft robots in materials that allow them to move and function in a more purposeful way. The research, led by the University of Bath, is described today in Science Advances.

Researchers develop hybrid human-machine framework for building smarter AI

Publicada en ScienceDaily, 07/03/2022.

Creating smarter, more accurate artificial intelligence systems requires a hybrid human-machine approach, according to researchers. In a new study, they present a new mathematical model that can improve performance by combining human and algorithmic predictions and confidence scores.

Simulated human eye movement aims to train Metaverse platforms

Publicada en ScienceDaily, 07/03/2022.

Computer engineers have developed virtual eyes that simulate how humans look at the world accurately enough for companies to train virtual reality and augmented reality programs. Called EyeSyn for short, the program will help developers create applications for the rapidly expanding metaverse while protecting user data.

Wooing Intel, Italy plans \$4.6 billion fund to boost chipmaking

Publicada en <https://www.reuters.com>, 01/03/2022.

ROME, March 1 (Reuters) - Italy plans to set aside more than 4 billion euros (\$4.6 billion) until 2030 to boost domestic chip manufacturing as it seeks to attract more investment from tech companies such as Intel, a draft decree seen by Reuters showed on Tuesday. The government is trying to persuade the U.S. group to spend billions of euros on an advanced chipmaking plant in Italy that uses innovative technologies to weave full chips.

What Is XR, and How Is It Radically Transforming Industries?

Publicada en <https://redshift.autodesk.com>, 26/04/2022.

Extended reality (XR) has been seeping into modern life for decades. From virtual reality (VR) arcade games in the early '90s to the millions of augmented reality (AR) lenses available on Snap AR, the evolution of XR is gaining steam. According to the research group Statista, the global XR market size, forecast at \$31 billion in 2021, is expected to swell to \$300 billion by 2024.

PATENTES

Additive manufacturing device, method, and medical product relating thereto

Publicada en Patentscope_Domótica, 21/04/2022.

Solicitantes: KUMOVIS GMBH [DE]/[DE]

The invention relates to an additive manufacturing device (14), in particular a 3D printer, for manufacturing at least one component (10) formed layer by layer, the device comprising: at least one construction chamber (16); at least one extrusion head (18) that is three-dimensionally movable inside the construction chamber (16); and at least one open-loop and/or closed-loop control device for open-loop and/or closed-loop control of the extrusion head (18)

[ver más...](#)

Building controller with antenna

Publicada en Patentscope_Domótica, 21/04/2022.

Solicitante: HONEYWELL INTERNATIONAL INC

A wall module for a building control system includes a back plate with one or more mounting features for mounting the backplate to a wall. A main body includes one or more attachment features for removably attaching the main body to the back plate. The main body also includes a front side and a back side, wherein at least part of the front side is formed by a front plate.

[ver más...](#)

Control method and control device for smart home appliance group

Publicada en Patentscope_Domótica, 21/04/2022.

Solicitantes: CHONGQING HAIER AIR CONDITIONER CO., LTD [CN]

A control method and a control device for a smart home appliance group. The control method comprises: acquiring an authorization instruction used to authorize the use of a work environment, wherein the authorization instruction comprises information of a control terminal allowed to use the work environment, and authorization level information; acquiring information of a smart home appliance group working in the work environment, wherein the smart home appliance group comprises one or more smart home appliances

[ver más...](#)

Process control method for a 3d-printing process

Publicada en Patentscope_Domótica, 15/04/2022.

Solicitante: IVOCLAR VIVADENT AG

A process control method for a 3D-printing process, in particular a stereolithography process and/or a DLP (digital light processing) process, using a 3D printer is provided. The 3D printer has a building platform, a light source, a receiving device for printing material and a control device by means of which an item can be produced layer-wise or continuously from the printing material.

[ver más...](#)

Building system with an in-zone plume control system

Publicada en Patentscope_Domótica, 14/04/2022.

Solicitante: Johnson Controls Tyco IP Holdings LLP

A building system of a building includes an in-zone plume control system located within a zone of the building, the in-zone plume control system including one or more return air inlets comprising openings to receive one or more air plumes generated by one or more users.

[ver más...](#)

Integrated orchestration of intelligent systems

Publicada en Patentscope_Domótica, 14/04/2022.

Solicitante: TTEC Digital, LLC

Systems and methods for integrated orchestration of intelligent systems. An intelligent systems orchestration system harvests and combines aspects of disparate intelligent systems for use in intelligent virtual assistant applications and automation applications. In one aspect, the system provides an intelligent orchestration between cognitive plugins, such as natural language processing, sentiment analysis, speech recognition, text-to-speech, and computer vision.

[ver más...](#)

Intelligent life-saving system for high-rise building and electromechanical device for intelligent fast descent

Publicada en Patentscope_Domótica, 14/04/2022.

Solicitante: Qiushi YE

The present invention discloses an intelligent life-saving system for a high-rise building and an electromechanical device for intelligent fast descent. The life-saving system includes a coverall with short-term high temperature resistance, cushioning and collision resistance, an oxygen-supplying helmet, a high-temperature resistant sling, and an electromechanical device for intelligent fast descent.

[ver más...](#)

Network system of home appliance and network setup method of the same

Publicada en Patentscope_Domótica, 14/04/2022.

Solicitante: Samsung Electronics Co., Ltd.

A home appliance includes a first communication circuitry configured to communicate with a mobile terminal placed within a first communication range supporting a first communication method, a second communication circuitry configured to communicate with an external wireless access point apparatus placed within a second communication range supporting a second communication method

[ver más...](#)

Smart home system with firearm tracking

Publicada en Patentscope_Domótica, 14/04/2022.

Solicitante: Patrice Mogaka

A smart home system with firearm tracking includes a sensor network installed within a building and a control panel including an input mechanism, a display screen, a wireless transceiver, and a scanning mechanism. The system is configured to monitor at least one firearm that has an ammunition sensor, a GPS sensor, a wireless transceiver, and a magazine having a unique scannable QR code.

[ver más...](#)

Systems and methods for conserving thermal and electrical energy usage in buildings and houses

Publicada en Patentscope_Domótica, 14/04/2022.

Solicitante: The Regents of the University of Colorado, a body corporate
Systems and methods of use of movable shading devices, are disclosed. In some example implementations, the system can include one or more movable shading devices, where the one or more movable shading devices are configured to be selectively moveable, based on control by a programmable controller, with respect to an external surface of a building or house, where the external surface of the building or house includes at least one wall surface and at least one roof surface,

[ver más...](#)

A virtual reality based security system for vacant homes

Publicada en Patentscope_Domótica, 08/04/2022.

Solicitante: Lovely Professional University

The present invention relates to a virtual reality based security system for the vacant homes. The present invention consists of relay control units (105), a customized light controller (102), a RTC counter module (103), and light sensors (101). In the present invention, real environment is portrayed related to the presence of occupants in the vacant home by employing lights sequencing algorithm which switches on/off lights at different intervals every day

[ver más...](#)

Intelligent automation and control of smart wheelchair appliances for disabled individuals using iot and machine learning

Publicada en Patentscope_Domótica, 08/04/2022.

Solicitante: Ms.M.Rathi, Kings Engineering College et al.

The eye-gazing wheelchair is a unique device that is mostly utilized by impaired persons who are fully immobile. Manual wheelchair control is replaced in this technology with automated wheelchair control, which is controlled by ocular movement, allowing patients to feel and maneuver with less or no difficulty. A camera captures a continuous image, which is subsequently subjected to various image processing algorithms.

[ver más...](#)

Control method for smart home system

Publicada en Patentscope_Domótica, 07/04/2022.

Solicitante: QINGDAO HAIER WASHING MACHINE CO., LTD. [CN]

A control method for a smart home system, the smart home system comprising a smart socket and a laundry treatment device, wherein the laundry treatment device is electrically connected to the smart socket. The control method comprises: measuring electricity consumption parameters of a laundry treatment device by means of a smart socket; determining operation information of the laundry treatment device according to the electricity consumption parameters; determining the amount of detergent consumed by the laundry treatment device according to the operation information

[ver más...](#)

Displaying a virtual image of a building information model

Publicada en Patentscope_Domótica, 07/04/2022.

Solicitante: XYZ REALITY LIMITED

A headset for use in displaying a virtual image of a building information model (BIM) in relation to a site coordinate system of a construction site. The headset comprises an article of headwear having one or more position-tracking sensors mounted thereon, augmented reality glasses incorporating at least one display, a display position tracking device for tracking movement of the display relative to at least one of the user's eyes and an electronic control system.

[ver más...](#)

Load control system responsive to the location of an occupant and/or mobile device

Publicada en Patentscope_Domótica, 07/04/2022.

Solicitantes: Lutron Technology Company LLC

A load control system for controlling an electrical load in a space of a building occupied by an occupant may include a controller configured to determine the location of the occupant, and a load control device configured to automatically control the electrical load in response to the location of the occupant.

[ver más...](#)

Method and system for controlling laundry processing device and device

Publicada en Patentscope_Domótica, 07/04/2022.

Solicitante: QINGDAO HAIER WASHING MACHINE CO., LTD. [CN]

A method and system for controlling a laundry processing device and equipment. The method comprises: after washing has finished, by detecting and determining whether, when configuring a washing program, a laundry processing device has been set with a subsequent operation at the end of washing, such as shaking loose and/or drying

[ver más...](#)

System for and method of detecting communication security in building automation and control networks

Publicada en Patentscope_Domótica, 07/04/2022.

Solicitante: Johnson Controls Technology Company

A building system includes heating ventilation or air conditioning (HVAC) devices configured for communication on a building automation network and a communication engine. The communication engine is configured to provide a diagnostic attribute.

[ver más...](#)

Systems and methods for generating spectator images of an artificial reality environment

Publicada en <https://worldwide.espacenet.com>, 01/04/2022.

Solicitante: Facebook Technologies LLC [US]

A method includes a computing system receiving a first-person image that captures an artificial-reality environment from a first-person perspective of a user of a head-mounted device, wherein the first-person image is rendered based on a pose of the head-mounted device.

[ver más...](#)

Systems and methods of verifying installation of building automation devices

Publicada en Patentscope_Domótica, 31/03/2022.

Solicitante: Honeywell International Inc.

Methods and systems may be configured to verify proper installation of Internet Protocol (IP) connectable building automation devices by installers at remote sites. The installers may be a crowdsourced installers.

[ver más...](#)

Intelligent home automation using iot and machine learning

Publicada en Patentscope_Domótica, 25/03/2022.

Solicitante: Hindustan College of Arts & Science

Home Automation may be utilized to keep a house in a pleasant state. The less the user has to engage with the system, the easier it is to use. To automate the room's equipment and peripherals, you may utilize faces as a key. Pre-selected gadgets turn on automatically as soon as a person enters the room, so there's no need to be manually activated.

[ver más...](#)

Room automation system using iot

Publicada en Patentscope_Domótica, 25/03/2022.

Solicitante: Bibhudendu Panda, et al.

ABSTRACTT his work aims to solve problems of common peoples in day to day life. Atomizing home with using node MCU which is Wi-Fi model and using blynk app. Blynk app is used as third party app. It provide open source to user make to design automation in less price. Different sensors are connected to node MCU and can operate from any part of world with help of Blynk app.

[ver más...](#)

lot based home automation

Publicada en Patentscope_Domótica, 18/03/2022.

Solicitante: AKMAL RAFI

Proposed system has two advantages.1.Using the IoT connectivity, we can monitor and access our smart home easily from anywhere, which will definitely will prove to be energy efficient.2.It act has a helping hand for the old age and differently abled person.

[ver más...](#)

Automated window-cleaning device

Publicada en Patentscope_Domótica, 17/03/2022.

Solicitante: SHEVCHENKO, Viktor Mikhaylovich [RU]

The invention relates to the field of washing and cleaning building facilities. The aim of the invention is to create an automated device for safely and efficiently cleaning the outside surfaces of windows situated at any height.

[ver más...](#)

Autonomous robotic system for point control of weeds

Publicada en Patentscope_Domótica, 17/03/2022.

FIELD: agriculture; machine building. SUBSTANCE: invention relates to agricultural machine building, in particular to complexes for weed control. Autonomous system for point control of weeds contains a frame with three horizontal and one vertical guides and a carriage installed on them, connected to a control unit and driven by four stepper motors.

[ver más...](#)

Focus-object-determined communities for augmented reality users

Publicada en <https://worldwide.espacenet.com/>, 15/03/2022.

Solicitante: IBM [US]

According to one embodiment, a method, computer system, and computer program product for creating a social network in augmented reality (AR) based on focus objects is provided. The present invention may include monitoring an augmented reality session of a user; detecting focus objects of a user during the augmented reality session;

[ver más...](#)

Deep learning model inspired automatic door lock system for avoiding the collision with obstacles during opening the car door

Publicada en Patentscope_LED, 04/03/2022.

Solicitante: UTTARANCHAL UNIVERSITY.

Deep learning model Inspired Automatic Door Lock System for Avoiding the Collision with obstacles During Opening the Car Door Discloses herein a Deep learning model Inspired Automatic Door Lock System for Avoiding the Collision with obstacles During Opening the Car Door comprises Controller Unit(80), Car Lock System (81), Xbee Pro-S Module includes Bluetooth 5 module, Battery Power Supply

[ver más...](#)

Low-cost home automation using iot principles

Publicada en Patentscope_Domótica, 04/03/2022.

Solicitantes: Dr.S.Prabu et al.

Given the scenario presented, this work aims to propose a low-cost model for the application of home automation as a comfort, independence and entertainment tool in common homes, considering the available wireless communication technologies and low-cost devices for its operation.

[ver más...](#)

Building automation programming using ui representations of physical models

Publicada en Patentscope_Domótica, 03/03/2022.

Solicitante: PassiveLogic, Inc.

A controller is described that a building design can be input into, the building design comprising inputting a layout, predefined resources and positions for resources. within the layout.

[ver más...](#)

Distributed building automation controllers

Publicada en Patentscope_Domótica, 03/03/2022.

Solicitante: PassiveLogic, Inc.

Controllers that control a building's state functions can be controlled by a master controller that the controllers choose themselves. The master controller communicates with the controllers and sensors to determine when a building state should change.

[ver más...](#)

Light fixture of building automation system

Publicada en Patentscope_Domótica, 03/03/2022.

Solicitante: enLighted, Inc.

There is described a building automation system comprising a mobile tag, sensor devices, and a sensor hub. The mobile tag transmits a broadcast beacon based on RF technology. The sensor devices are co-located with light fixtures and include antennas for receiving a broadcast beacon.

[ver más...](#)

Temperature sensor isolation in smart-home devices

Publicada en Patentscope_Domótica, 03/03/2022.

Solicitante: Google LLC

A smart-home device may include a housing, a printed circuit board (PCB) inside the housing, an environmental sensor mounted to the PCB inside the housing, and a gasket that encloses the environmental sensor inside the housing

[ver más...](#)

Virtual keyboard

Publicada en <https://worldwide.espacenet.com>, 03/03/2022.

Solicitante: QUALCOMM INC [US]

Systems, apparatuses (or devices), methods, and computer-readable media are provided for generating virtual content. For example, a device (e.g., an extended reality device) can obtain an image of a scene of a real-world environment, wherein the real-world environment is viewable through a display of the extended reality device as virtual content is displayed by the display.

Systematic review analysis on smart building: challenges and opportunities

Publicada en *Tecnologías Inteligentes*, 06/03/2022.

Smart building technology incorporates efficient and automated controls and applications that use smart energy products, networked sensors, and data analytics software to monitor environmental data and occupants' energy consumption habits to improve buildings' operation and energy performance. Smart technologies and controls are becoming increasingly important not only in research and development (r&d) but also in industrial and commercial domains, leading to a steady growth in their application[...]

1. Review Planning
1.1. Overview of SRM
2. Conducting Literature Review
2.1. Locating of Literature Review
2.1.1. Literature Search Process
2.1.2. Inclusion and Exclusion Criteria
2.1.3. Quality Assessment Criteria
3. Analysis of Literature Review
3.1. Publication Trends of Smart Building
3.2. Literature Classification Based on Domain of SRM
3.3. Literature Classification Based on Control Approach
3.4. Literature Classification Based on SRM Technology
3.5. Literature Classification Based on Study Location
4. Discussion and Recommendations
4.1. Reporting Finding
4.2. Implications of the Study
5. Conclusion

Pedestrian Stop and Go Forecasting with Hybrid Feature Fusion

Publicada en <https://arxiv.org/>, 04/03/2022.

Forecasting pedestrians' future motions is essential for autonomous driving systems to safely navigate in urban areas. However, existing prediction algorithms often overly rely on past observed trajectories and tend to fail around abrupt dynamic changes, such as when pedestrians suddenly start or stop walking.

Explaining RADAR features for detecting spoofing attacks in Connected Autonomous Vehicles

Publicada en <https://arxiv.org/>, 01/03/2022.

Connected autonomous vehicles (CAVs) are anticipated to have built-in AI systems for defending against cyberattacks. Machine learning (ML) models form the basis of many such AI systems. These models are notorious for acting like black boxes
